

Fracture Modeling of quench hardenable boron steel

PhD student: Stefan Marth

Duration: 2015 - 2020

Funding: Luleå University of Technology

Advisor: Hans-Åke Häggblad

Research Scope:

- Increase accuracy of material models for phase transformation of boron steel
- Fracture criteria for different phases of boron steel
- Implementation of a multi phase material fracture model
- Extend the fracture modeling to further more sheet metals

Division of Mechanics of Solid Materials
