

Industrial Production Processes for Nanoreinforced Composite Structures

PhD student: Linn Berglund

Duration: Sept 2015 – 2020

Funding: European Commission under INCOM EC FP7

Advisor: Prof. Kristiina Oksman, Dr. Yvonne Aitomäki

Research Scope:

- Optimization of ultrafine grinding process for fibrillation of nanofibers from different cellulosic sources.
- Targeting upscalable efficient production and application in lightweight structures based on advanced sustainable materials.
- Development of tools for quality assessment applicable as online measurements during the fibrillation process

Luleå University of Technology Division of materials science,
Wood and bionanocomposite group
